1. Performance Analysis and Demand Evaluation

1.1 Booking Pace and Forecasting Approach

Saiyuen Adventure Park has 39 tents available for each analysed date. A historical pickup-based approach was used to assess booking pace and estimate base unconstrained demand. Pace is calculated as COTB minus STLY; last-year pickup, or reach, is calculated as Last Year Actual minus STLY; and base unconstrained demand is estimated as COTB plus last-year pickup.

Across all five dates, both COTB and STLY are zero, so the current pace is zero. This means Saiyuen is not behind the same point last year. Therefore, zero COTB should not be interpreted as weak demand, but as limited early booking visibility and a likely late-pickup pattern.

Table 1

Pace, Pickup and Unconstrained Demand Forecast

Date	DOW	COTB Tents	STLY Tents	Pace	Reach	Unconstrained Demand	Demand Level	RM Implication
8/5/2026	Wed	0	0	0	5	5	Low	Stimulate demand
8/6/2026	Thu	0	0	0	7	7	Low-Moderate	Flexible pricing
8/7/2026	Fri	0	0	0	10	10	High	Protect rate
8/8/2026	Sat	0	0	0	11	11	Peak	Strict rate control
8/9/2026	Sun	0	0	0	5	5	Moderate	Extend-stay package
Total		0	0	0	38	38		

1.2 Historical Demand Pattern and Revenue Implications

The forecast shows a clear day-of-week demand pattern. Wednesday and Thursday are weak, with low volume and ADR as low as \$452.71 on Thursday. Friday and Saturday show stronger demand quality, with Saturday achieving the highest ADR (\$1,008) and volume (11 tents). Sunday's volume falls back, but ADR remains high at \$950.60.

These results suggest that Saiyuen should avoid a uniform pricing response. Weekdays

require demand stimulation through flexible pricing, packages or stronger channel exposure, while Friday and Saturday should be protected from unnecessary discounting. Since Saturday occupancy was only 28.2% and period occupancy was 19.5%, the key opportunity is both rate protection and better conversion of unsold inventory.

2. Competitive Set Definition and Justification

Saiyuen's core demand is local residents, with leisure guests on weekends and school/corporate groups on weekdays, the primary competitive set should focus on Hong Kong-based glamping, camping and outdoor experience providers rather than general hotels. Although Chi also mentioned Shenzhen and Zhuhai as competitive alternatives due to economic leakage from Hong Kong, they are treated as secondary competitors because they differ in location, travel context and distribution environment.

2.1 Primary Competitive Set

The table compares Saiyuen's four primary competitors using the comp set criteria of location, product type, published pricing level, brand positioning, size and source of business.

Table 2

Competitive Set Criteria Comparison

Competitor	Location	Product Type and Facilities	Pricing Level	Brand Positioning	Size	Source of Business
Long Coast Seaports (Lake Valley, n.d.)	Lower Cheung Sha, Lantau Island, Hong Kong. Approx. 8 km from Saiyuen.	Beachglamping, caravans, safari tents and BBQ site. Water sports include kayaking, bodyboarding, windsurfing, SUP and surfing. Breakfast and kid facilities are available.	HK\$2,000+; Safari Tent plus BBQ packages are about HK\$2,080-HK\$4,473.	Beachfront glamping and water-sports experience for short-break leisure and group activities.	580,000 sqm camp. 15 campsites, which can accommodate up to 61 people.	Hong Kong families, friends, couples, expatriates and corporate team-building groups.
Park Nature Hillside (Park Nature Hillside, n.d.)	Ta Kwu Ling, New Territories, Hong Kong. Approx. 45 km from Saiyuen.	Space-themed RVs and transparent igloos. Facilities include wedding and conference venue, bar, balance car track, convenience store, parking and pet-friendly RV options.	Mid-to-premium; observed rates are roughly HK\$2,000-HK\$3,600.	Space-themed luxury caravan and stargazing glamping for guests seeking novelty and photo-friendly stays.	About 22 sellable units: 18 space RVs and 4 transparent igloos.	Hong Kong families, couples, friends, pet owners and self-drive guests.
Lake Valley (Ma Wan 1868, n.d.)	Lin Ma Hang, Ta Kwu Ling, New Territories, Hong Kong. Approx. 45 km from Saiyuen.	Nature campsite with wilderness camping, sail tents, stargazing, luxury cabins, safari tents and bring-your-own-tent options. Pet-friendly grounds are available.	Value-to-mid; BYOT from around HK\$250 and main glamping offers around HK\$650-HK\$1,300.	Large nature-based camping and glamping destination with scenic, pet-friendly and group-friendly appeal.	Large-scale campsite of about 280,000 sq. m. 58 campsites.	Hong Kong families, couples, friend groups, pet owners, hikers and campers.
Island Hideout (Long Coast Seaports Limited, n.d.)	Ma Wan 1868, Ma Wan, Hong Kong. Approx. 18 km from Saiyuen.	Hilltop glamping tents and self-camping pitches. Facilities include fitted camping gear, mattresses, bedding, tuck shop, BBQ packages, workshops, campfire space and event space.	From HK\$400 per pitch; tent experiences are commonly around HK\$950-HK\$1,600 depending on date and platform.	Boutique island hilltop glamping with scenic views, weddings and team-building appeal.	Small-scale hilltop glamping venue with four tent types: 2-person, pet-friendly 2-person, 3-person and 4-person tents. Total unit count not publicly disclosed.	Hong Kong couples, friends, families, pet owners, wedding guests and team-building groups.

2.2 Saiyuen's Market Position

Saiyuen is best positioned as a mid-to-premium outdoor experiential accommodation provider rather than a basic campsite. Its strength lies in its “one-stop” experience, combining themed tents, BBQ, adventure activities, and customised school or corporate packages. This gives Saiyuen a broader activity base than more accommodation-led competitors such as Park Nature Hillside and Island Hideout, while Long Coast Seasports remains a close activity-led competitor. Lake Valley and public campsites create lower-price reference points. Therefore, Saiyuen should emphasise its high-value, activity-led niche and justify its premium.

2.3 Recommended Price Positioning and Pricing Approach

According to Chi, Saiyuen currently appears to use a relatively simple pricing system. It does not apply dynamic pricing, reviews rates about once a year, and mainly differentiates prices by weekdays, weekends, holidays and facilities. Based on the competitive set and demand analysis, we recommend a value-based positioning. Saiyuen should not use a broad undercutting strategy because competing mainly on price would weaken its one-stop experiential positioning and reduce rate integrity.

For the pricing approach, Saiyuen should mainly use a matching approach, instead of broad undercutting. Saiyuen competes with similar Hong Kong glamping and outdoor experience providers, but still needs its value proposition to justify the booking decision. Demand analysis also supports this: Friday and Saturday rates should be protected, while weaker weekdays should use value-added packages.

3. Pricing and Inventory Control Recommendations

3.1 Pricing Decision Logic

Saiyuen's pricing should be value-based and demand-sensitive. Compared with its competitors, Saiyuen holds a mid-to-premium position. Chi confirmed that August is a low-demand period, so pricing should remain cautious: weaker weekdays should stimulate conversion, while Friday and Saturday should protect rate integrity and weekend willingness to pay.

3.2 Specific Selling Price Recommendations

The recommended prices use Saiyuen's existing product-tier price ladder as the base and apply tactical adjustments on weaker dates. Since Saiyuen broadly maintains rate parity across channels, these prices should be treated as public rates across major channels, while direct bookings should be supported through value-added benefits rather than lower public prices.

The table uses three representative tiers to make the recommendations specific: Lead-in refers to BYOT, Standard is represented by Sapa Teepee, and Premium is represented by Geodesic Dome

Table 3

Recommended Selling Prices by Product Tier and Date

Date	DOW	Demand Level	LY ADR (HKD)	Product Tier	Official Rack Rate (HKD)	Recommended Price (HKD)	Pricing Rationale
8/5	Wed	Low	\$633.80	Lead-in	500	500	Keep the entry price unchanged to preserve accessibility without diluting the wider glamping price structure.
				Standard	1,380	1,180	Weakest date; a limited tactical discount can stimulate weekday conversion when occupancy risk is high.
				Premium	1,920	1,820	Only slight softening is applied so that the premium tier remains clearly above standard glamping.
8/6	Thu	Low-Moderate	\$452.71	Lead-in	500	500	Maintain the entry rate because Thursday is stronger than Wednesday and should not be over-discounted.
				Standard	1,380	1,280	Apply a smaller weekday adjustment to support pickup while keeping the product value clear.
				Premium	1,920	1,920	Protect the premium rate and use value-added benefits rather than a public price cut.
8/7	Fri	High	\$950.60	Lead-in	500	500	Maintain full rate as demand shifts towards the weekend.
				Standard	1,380	1,380	Protect weekend willingness to pay and avoid broad undercutting.
				Premium	1,920	1,920	Keep full rack rate to preserve ADR on a stronger demand date.
8/8	Sat	Peak	\$1,008.18	Lead-in	700	700	Maintain the Saturday entry rate because this is the peak date.
				Standard	1,680	1,680	No discount; Saturday has the strongest revenue opportunity.
				Premium	3,200	3,200	Capture full premium from weekend guests seeking a higher-value experience.
8/9	Sun	Moderate	\$950.60	Lead-in	500	500	Keep the entry price unchanged and avoid unnecessary price dilution.
				Standard	1,380	1,280	Use a moderate adjustment to encourage weekend extension and improve conversion.

This recommendation is deliberately selective: lead-in prices remain unchanged, standard rates are tactically reduced on weaker dates, and premium tents are mostly protected. This supports weekday conversion without weakening Saiyuen's mid-to-premium positioning.

Note: Official rack rates are based on Saiyuen's price list.

3.3 Inventory Control Measures and Revenue Contribution

Since forecast demand remains below Saiyuen's 39-tent capacity, strict restrictions such

as default MLOS, CTA rules or blackout dates are not recommended for this August period. Instead, Saiyuen should use light, practical and pace-based controls.

Keep weak dates open and reduce booking friction. For Wednesday and Thursday, all tent categories should remain open across major public channels, with no minimum stay, deposit requirement or arrival restriction. Flexible cancellation should also remain for weak weekdays. This reduces unsold perishable inventory and improves occupancy conversion.

Control tactical discounts by booking pace. The standard-tier weekday discount should be temporary rather than a permanent low rate. Saiyuen can review pickup weekly and during the final two-week booking window. If pickup reaches or exceeds last year's sold tents for the same date, the discounted rate should be closed. This stimulates early demand while protecting ADR from lower-rated late bookings.

Protect high-value inventory through direct packages. Premium tents on Friday and Saturday should not be publicly discounted. Instead, direct channels (website, WhatsApp, email) should promote value-added packages such as weekday BBQ bundles. For premium weekend or activity-inclusive packages, Saiyuen can request partial deposits, and tentative school or corporate group blocks should only be held briefly unless confirmed by deposit. This protects ADR, increases ancillary revenue and prevents unconfirmed demand from displacing sellable FIT inventory.

Together, these measures optimise revenue by matching inventory control intensity with demand level: weak dates stay open to improve occupancy, stronger dates protect ADR, and direct packages increase total customer worth without broad price undercutting.

4. Distribution Channel Audit and Strategy

4.1 Current Distribution Structure

Saiyuen operates a relatively concentrated distribution system. The official website serves as the primary booking channel, followed by Trip.com, Klook, and Holimood, while Booking.com and Agoda contribute marginally. Group bookings are mainly handled through direct communication channels such as email, WhatsApp, and telephone enquiries.

This structure reflects a strong reliance on direct distribution rather than broad OTA penetration. It allows Saiyuen to maintain higher control over pricing, customer communication, and product bundling, which is particularly important for customised school and corporate group bookings. Overall, the channel mix demonstrates a direct-dominant model with selective OTA participation.

4.2 Channel Performance and Rate Integrity

From a revenue perspective, direct bookings generate the highest value due to zero commission costs and greater flexibility in upselling bundled experiences. Among OTA platforms, Klook is identified as the most profitable channel, followed by Trip.com and Holimood, reflecting stronger alignment between experience-based products and activity-driven platforms.

A controlled level of price variation is observed across channels. For example, OTA prices may be lower due to promotional campaigns or platform subsidies, rather than structural pricing inconsistencies. This reflects a deliberate demand-stimulation strategy rather than pricing misalignment.

4.3 Rate Integrity and Strategic Implications

Overall, Saiyuen maintains a high level of rate integrity, with prices broadly aligned across channels. Instead of competing through discounted public rates, the official website differentiates itself through bundled packages and value-added offerings such as activity inclusions and referral benefits. This reinforces the website's role as a value anchor while OTA platforms function primarily as demand generators.

4.4 Distribution Recommendations

To improve performance, Saiyuen should enhance experiential storytelling on its official website to better communicate its glamping and activity-based value proposition. OTA channels such as Klook and Trip.com should focus on bundled packages combining accommodation and activities rather than standalone room sales. Finally, maintaining controlled price segmentation across channels is recommended to balance demand stimulation with brand value protection.

Table 4

Distribution Channel Assessment

Channel	Role	Strength	Weakness	Strategic Importance
 Official Website	Primary channel	• Low cost (no commission) • High brand control • Flexible packages and upselling	• Limited exposure • Requires ongoing marketing investment	★ ★ ★ ★ ★ Very High
 Trip.com	OTA visibility	• Large user base • Good for accommodation discovery • Supports last-minute bookings	• <u>Commission cost</u> • <u>Less control over presentation</u> • Price comparison pressure	★ ★ ★ ★ ★ High
 Klook	Experience platform	• Most profitable OTA • Strong fit with activity and experience products • High conversion for packages	• Limited focus on accommodation only • Smaller audience than Trip.com	★ ★ ★ ★ ★ High
 Holimood	Niche OTA	• Targets outdoor and adventure audience • Lower competition	• Small scale • Limited marketing exposure	★ ★ ★ Medium
 Direct Group Sales	Group business	• High flexibility • Customised packages • Higher ADR potential	• Labour intensive • Depends on sales resources	★ ★ ★ ★ ★ High

5. Mainland China Market Strategy

Saiyuen should treat the Mainland China market as a selective conversion market rather than a simple traffic market. The issue is not only whether Mainland guests can see Saiyuen, but whether they can understand the product, trust the booking path and feel that the trip is worth the effort. This matters because Saiyuen is still mainly supported by Hong Kong residents, while management also noted several Mainland barriers, including payment, language, lack of simplified Chinese information, transport, and uncertainty about whether the product fits Mainland visitors' Hong Kong trip purpose.

The short-term target should therefore be narrower than 'all Mainland tourists'. Greater Bay Area families, repeat visitors to Hong Kong, young couples or friends interested in outdoor lifestyle, and selected school or corporate groups are more realistic. This is linked to Saiyuen's current demand base: weekend demand already comes mainly from families, friends and couples, while weekdays are more related to school and corporate groups. First-time visitors typically prioritise city attractions over outlying islands.

The revised competitive set for Mainland guests is also wider than local Hong Kong campsites. It should include three groups: Hong Kong experiential campsites and glamping sites, cheaper weekend leisure products in Shenzhen and Zhuhai, and familiar Hong Kong city-based itineraries. This means Saiyuen should not compete mainly through lower headline prices. Its stronger position is a packaged Hong Kong island outdoor experience: safe, family-friendly, international, and different from a normal city trip.

Our platform review suggests that Mainland-facing conversion is currently weak. Ctrip and Trip.com listings exist, but the visual presentation, review score and information structure do not strongly reduce booking hesitation. Xiaohongshu shows interest, but search results are mainly official posts with limited organic user-generated content. The comment thread also shows repeated questions about price and booking method, while the account often replies through private messages. WeChat search visibility appears weak, and the official website still lacks a simplified Chinese booking path. Together, these signals suggest that Saiyuen has an information and confidence gap, not only an awareness gap.

Table 5

Mainland Channel Audit and Revenue Implications

Platform	Evidence	Observed issue	Revenue implication	Recommended action
Ctrip / Trip.com		Listing exists, but cover image, rating and information layout do not fully sell the experience.	Search exposure may not convert into booking confidence.	Improve cover image, package names, room-type clarity, transport guidance and cancellation/payment information.
Klook		Management ranked Klook as the strongest third-party channel among Klook, Trip and Holimood for profitability.	Best fit for activity-led packages and experience conversion.	Use Klook for activity bundles and experience-led offers rather than generic accommodation listing only.
Xiaohongshu		Search results are mainly official posts; comment thread shows many price and booking questions.	Interest exists, but public price/package information and conversion path are weak.	Post clearer SC package cards, transport guides and booking links; encourage UGC from families and GBA visitors.
WeChat Search		Strongly relevant search results are limited; official entry is not prominent.	Weak enquiry and trust entry point for Mainland users.	Create a clearer WeChat enquiry path and link it from Xiaohongshu, Trip/Klook and the SC page.
Official Website		Current language options are English and Traditional Chinese; no clear Simplified Chinese booking path.	Information friction remains before direct booking. and Klook should focus on conversion, with simple package names and clear inclusions. WeChat should sup	Add SC landing page with package, transport, payment, cancellation and WeChat enquiry information.

Source: management Q&A and group platform screenshots.

The channel strategy should follow the booking journey. Xiaohongshu should create interest through visual content such as glamping scenes, sunset views, family activities and the Cheung Chau island setting. Trip.com and Klook should focus on conversion, with simple package names and clear inclusions. WeChat should support Mandarin enquiries, group follow-up and pre-arrival communication. A simplified Chinese booking page should become the main trust point, showing room types, cancellation rules, payment guidance and transport steps clearly.

Mainland Guest Booking Confidence Funnel

Figure 1

Mainland Guest Booking Confidence Funnel

Three offer directions are recommended. First, a Greater Bay Area Family Glamping Package can combine one-night glamping, BBQ, child-friendly activities and clear transport guidance. Second, a Slow Hong Kong Island Escape Package can target repeat visitors, couples and friends who want a different Hong Kong experience beyond shopping and city attractions. Third, a School or Corporate Outdoor Learning Package can target weekday demand through team-building or outdoor learning activities. These should be value-added packages, not deep discounts.

To protect rate integrity, Saiyuen should keep base accommodation rates consistent across direct and third-party channels. Differences should come from package design, direct-booking benefits, clearer information and channel-specific value fences. In this way, distribution supports visibility and conversion, while pricing protects Saiyuen's value position.

Table 6

Confidence-before-discount Strategy Matrix

Strategy point	Meaning	RM purpose
Target repeat and GBA visitors first	Avoid wasting effort on first-time tourists who may prefer city attractions.	Improve conversion efficiency.
Add SC booking page	Reduce uncertainty about room type, price inclusions, transport, payment and cancellation.	Increase booking confidence and direct conversion.
Use Trip/Klook for conversion	Put packages on platforms Mainland guests already use for travel booking.	Improve channel conversion.
Keep base rate consistent	Do not damage price integrity across platforms.	Protect rate parity and value position.
Add value through packages	Make the stay feel worth the travel effort without headline discounting.	Raise perceived value and RevPAT potential.

8/9/2026	Sun	0	\$0	/	0	\$0	/	5	\$4,753	\$950.60	0	\$0	/	5	\$4,753	\$950.60	5	\$4,753	\$950.60
Total		0	\$0	/	0	\$0	/	38	\$31,687	\$833.87	0	\$0	/	38	\$31,687	\$833.87	38	\$31,687	\$833.87

1.3 Occupancy and Revenue Efficiency Calculations

Date	DOW	LY Actual Tents	Available Tents	Occupancy	Revenue per Available Tent
8/5/2026	Wed	5	39	12.8%	\$81.26
8/6/2026	Thu	7	39	17.9%	\$81.26
8/7/2026	Fri	10	39	25.6%	\$243.74
8/8/2026	Sat	11	39	28.2%	\$284.36
8/9/2026	Sun	5	39	12.8%	\$121.87
Total		38	195	19.5%	\$162.50

Although Saiyuen has limited inventory, the historical occupancy levels indicate that capacity was not close to being fully used during the analysed period. Saturday was the strongest date, but its occupancy was still only 28.2%. The overall five-day occupancy was 19.5%. This suggests that the key revenue issue is not only how to protect higher rates on stronger weekend dates, but also how to improve conversion of unsold inventory, particularly on weaker weekday dates.

1.4 Visual Charts

Figure 1.4.1 Base Unconstrained Demand Forecast by Date

Note: Base unconstrained demand is calculated as COTB + last-year pickup/reach.
Since COTB and STLY are zero across all dates, the forecast equals last year's actual pickup.

Figure 1.4.2 ADR and Occupancy by Date

Note: ADR = revenue / tents sold. Occupancy = tents sold / 39 available tents.
Weekend dates achieved much higher ADR, while occupancy remained below 30% even on Saturday.

Appendix 4: Xiaohongshu Comment Keyword Scan

This is a quick keyword scan of the 371-comment thread provided by the group. It is not a formal sentiment analysis and should be used only as supporting evidence.

Signal	Keywords / examples	Count in comment lines	Interpretation
Price questions	價格, 價錢, 几钱, 幾錢, 收费, 收費, 多少钱	127	Users show interest but need clearer public price or package information.
Booking questions	预定, 預約, 怎么订, 報名, Book	22	Users need a more direct booking route.
Private-reply pattern	私您啦, 私信, 后台, PM, 已丝	132	The account often moves information to private messages, which may reduce public clarity.
Guangdong signal	广东	138	There is visible GBA-related interest, supporting GBA families / nearby visitors as a realistic segment.

Representative comment examples: "幾錢"; "看看价格"; "礼貌问一下价格"; "怎么预定, 什么价格"; "有无烧烤套餐".
